

CLIMBING ON

DELPH-IN 2014

CLIMBING ON

- Thesis 99.95% done
- What is the future of CLIMB
- How can CLIMB be made useful for others?

CLIMBING ON

CURRENT STATUS

- Approach works
- Possible usage of CLIMB:
 - SlaviCLIMB
 - Chinese CLIMB
 - CLIMB for new Korean grammar
 - Flexible Grammar Matrix
- Two versions:
 - procedural CLIMB (but Python hurdle)
 - declarative CLIMB (but not the full flexibility)

NEXT STEPS

- Remove some implementations from customization code to choices (e.g. valence patterns)
- Create interface that is easy to work with for grammar engineers:
 - Wishes?
 - Ideas?
