

# University of Washington site update

---

DELPH-IN Summit  
June 16, 2016  
Stanford

Emily M. Bender, Joshua Crowgey,  
Chris Curtis, Laurie Dermer, Michael Wayne  
Goodman, Kristen Howell, David Inman, Rik  
Koncel-Kedziorski, Michael Lockwood,  
Woodley Packard, Glenn Slayden, Olga  
Zamaraeva

# Grammar Engineering: 567

---

ISO 639-3	Lg Name	Lg Family	Grammar Authors
dtg	Toro Tegu	Niger-Congo	Garnick & Mansfield
eng	English	Indo-European	
gug	Paraguayan Guaraní	Tupí-Gurananí	Tittle & Wicke
hdn	Haida	Na-Dene	Pearah & Piepgrass
max	Ternate Malay	Austronesian	Preddy & Sen
pbv	Pnar	Austro-Asiatic	Jarvis & McCranie
shu	Chadian Arabic	Afro-Asiatic	Heath & Marsh
ybh	Yakkha	Sino-Tibetan	Arshad & Dai

# 2016 567 languages - mapped

---

lat/long data mostly from [wals.info](http://wals.info); map by [batchgeo.com](http://batchgeo.com)

# 2016 567 languages - cupcaked

Cupcakes by Laurie Dermer

# 2004-2016 567 Languages - mapped

---

# 2016 Items with end-to-end output (post transfer rule propagation)

---

# Grammar Engineering

---

- Thai (Glenn Slayden)
  - Significant expansion of lexicon; supported by new lexicon expansion tool
  - Grammatical aspect & VP syntax as foci of CLIMB-style development
- Lushootseed (Joshua Crowgey)
  - CLIMB-style development initiated
  - Exploration of semantic contribution of valence-changing affixes
  - Other grammar build-out
- Nuu-Chah-Nulth (David Inman) -- IGT on the way to morphological analyzer

# Grammar Matrix extensions

---

- Valence-changing lexical rules (Chris Curtis)
- Agreement in NP coordination (Laurie Dermer)
- Grammar Matrix bug fixes (Laurie Dermer)

# DELPH-IN tools (Michael Goodman)

---

- New pyDelphin versions (JSON serialization, REST client, EDS, etc)
- “Bottlenose” REST server
- gTest semantic tests
- AMR-look-alike serialization (singly-rooted dependencies)

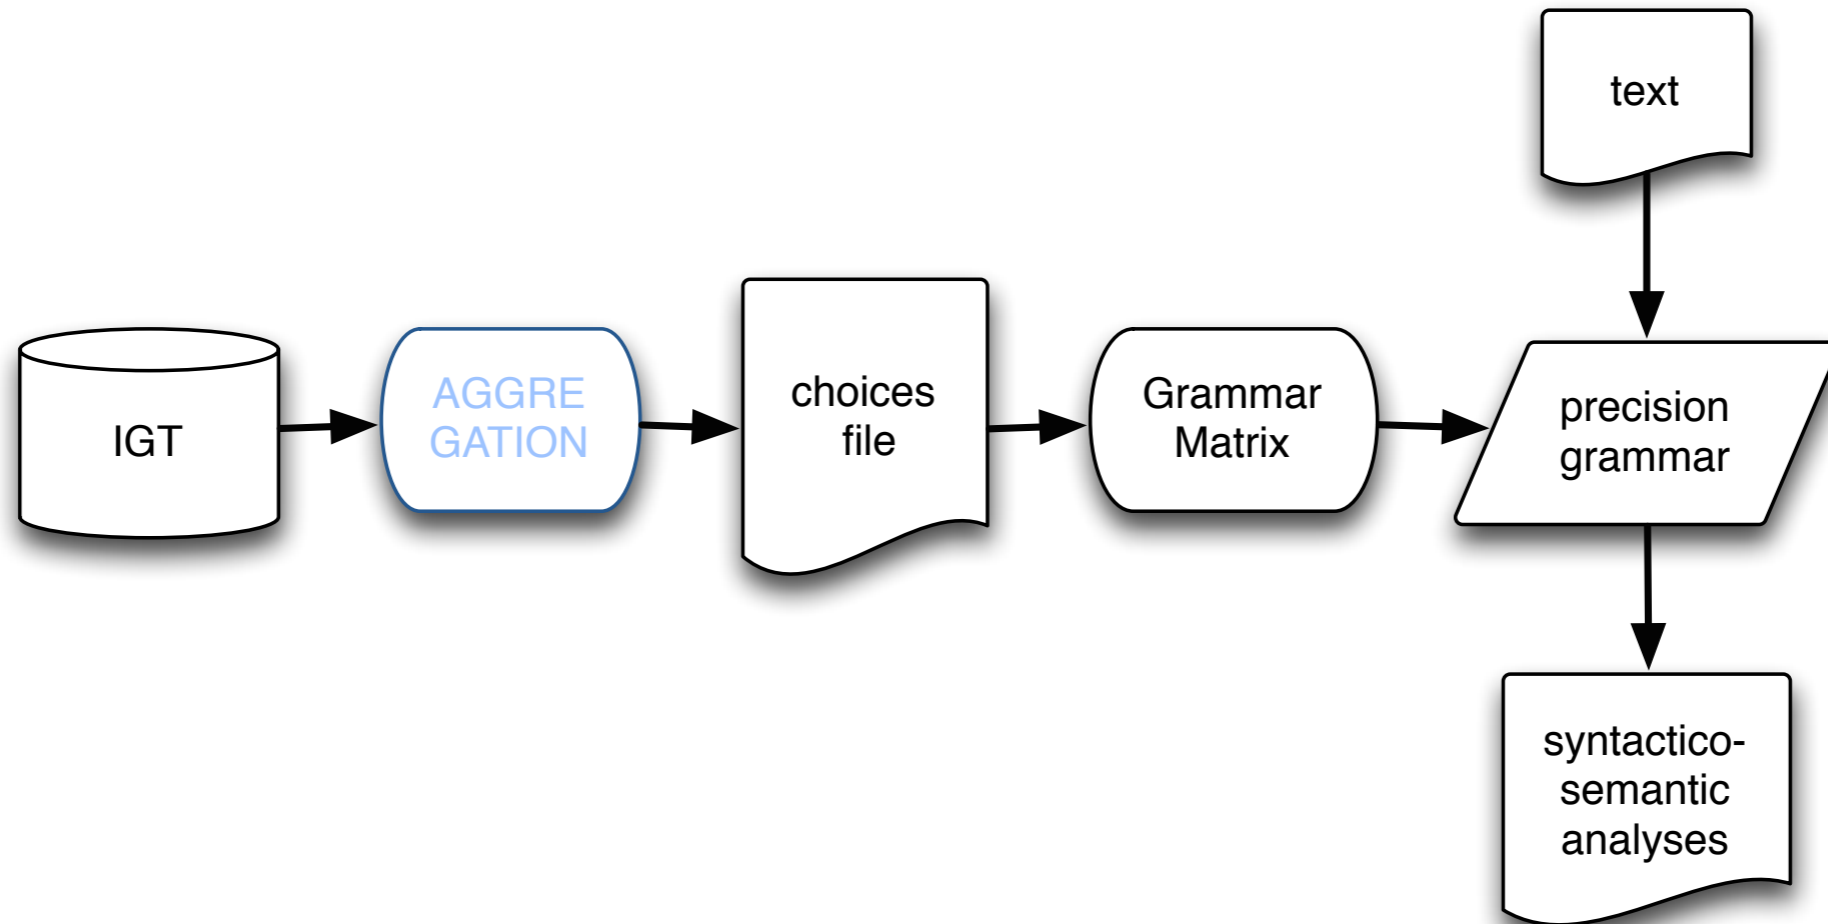

# Other

---

- Robust parsing with the ERG (Woodley Packard)
- Bilingual MRS alignment for statistical semantic MT (Michael Goodman)
- Alternative sets for focus-sensitive *only* (Kristen Howell)
- mrs2vec (Rik Koncel-Kedziorski)
  - Like Levy & Goldberg's (2014) generalized skip-gram model, but using dependency triples from ERS (from WikiWoods)
- Scores reasonably high on word similarity task
  - Future work: add retrofitting from WordNet (as in Furuqui et al 2015)

# AGGREGATION project

---

# AGGREGATION

---

- AGGREGATION Phase II funded! Will start up again in August.
- Main focus: Working on using intermediate outputs of inference to help field linguists sift through data
- Clustering for better position class discovery (Olga Zamaraeva)
- mapgloss -- clean up of glosses in IGT (Michael Lockwood)

# ERG Semantic Documentation

---

- Slow & steady wins the race
- ErgSemantics/Basics revised in light of feedback
- General sprucing up ahead of ERS tutorials
- Ahead: More documentation of phenomena
- Feedback always welcome

# MRS in Applications Seminar

---

- TempEval-3 temporal relation classification \*
- PTDB Discourse parsing - Arg2 identification
- PropBank-style SRL
- Relation extraction
- EHR de-identification
- STS \*
