

Constituent questions in the Grammar Matrix DELPH-IN 2020

Olga Zamaraeva

University of Washington

July 17 2020

Introduction

Constituent
questions

Data

Questionnaire

Matrix revisions

New types and
customization

Development
grammars

Conclusion

References

- ▶ I added constituent (aka wh-) questions support to the Matrix
 - ▶ pending merging into the trunk and held-out languages
- ▶ A range in wh-question typology is now covered in the Matrix
- ▶ I used append-lists for QUE/SLASH instead of diff-lists
- ▶ The analysis of optional fronting appears problematic (inelegant; new features etc.)
- ▶ A unified account of wh- and information structure filler-gap constructions is needed
 - ▶ See other presentation by me and Guy Emerson

Introduction

Constituent
questions

Data

Questionnaire

Matrix revisions

New types and
customization

Development
grammars

Conclusion

References

- ▶ Question words (all languages)
- ▶ Fronting
 - ▶ Single, multiple (many languages, e.g. English, Russian)
 - ▶ Obligatory, none/*in situ* (many languages); optional (Russian?)
- ▶ Question particles (many languages, e.g. Japanese)
- ▶ Morphological marking (many languages)
- ▶ Interrogative verbs (some languages, e.g. Chukchi)

- (1) **Who** did **what where and when?** [eng]
- (2) **Which person** did **which thing in which location in space and time?** [mrs-eng]

(3) What did you say Kim saw? [eng]

(4) *Kim saw what?

(5) Ty **gde** rabotaesh?
2SG **where** work.2SG.PRES
'Where do you work?' [rus]

(6) **Gde** ty rabotaesh?
where 2SG work.2SG.PRES
'Where do you work?' [rus]

Data: No fronting (*in situ*) and particles

(7) Dare ga kuru **no**?

who NOM come Q

‘Who will come?’ [jpn]

(8) *Dare ga kuru **ka**?

who NOM come Q

Intended: ‘Who will come?’

(9) Boku wa [dare ga kuru **ka/no**] sitteru

I TOP who NOM come Q know

‘I know who will come.’ [jpn] (Miyagawa 1987)

- (10) a. mit emd'e noŋōn kuded-**ōk**?
our younger.sibling what.for kill-1PL:ITRG
'What have we killed our younger brother for?'
(yux; Maslova 2003, p.153)
- b. *mit emd'e noŋōn kuded-**j**?
our younger.sibling what.for kill-1PL:TR
(intended) 'What have we killed our younger
brother for?'

Contribute question semantics without explicit noun
incorporation (Hagège 2008)

(11) ine- n- req -ēk -w i?

INE- N- **do.what?** -TH -TH

‘What are you doing to me?’ (ckt; Dunn 1999, p.89)

Questionnaire: Demo on the site

- ▶ Currently in my branch; not merged into the trunk and put on the main site yet

Matrix revisions: QUE and SLASH

- ▶ Replace *diff-lists* with *append-lists*
 - ▶ Mostly for ease of manipulation but possibly important to be able to do X
- ▶ Relax QUE and SLASH constraints throughout the Matrix core to allow length > 1
- ▶ Introduce features L-QUE (peripheral boolean) and WH (boolean wrapper)
- ▶ Introduce *clist* (canonical list; either empty, or a list of nongaps)

Matrix revisions: QUE and SLASH

- ▶ Replace *diff-lists* with *append-lists*
 - ▶ Mostly for ease of manipulation but possibly important to be able to do X
- ▶ Relax QUE and SLASH constraints throughout the Matrix core to allow length > 1
- ▶ Introduce features L-QUE (peripheral boolean) and WH (boolean wrapper)
- ▶ Introduce *clist* (canonical list; either empty, or a list of nongaps)
 - ▶ I suspect that all these new features may be avoided if follow (Ginzburg and Sag 2000) in treating nonfronted wh-words as QUE-empty and explaining “optional fronting” as mixture of wh and non-wh obligatory fronting

Introduction

Data

Questionnaire

Matrix revisions

New types and
customization

Development
grammars

Conclusion

References

- ▶ Added 2nd position particles analysis by Bender (LING567)
- ▶ Remove spurious SPR < > constraint on verbs
- ▶ Pushed an explicit linking of SUBJ to SLASH in extracted-subj phrase into the InfoStr library
 - ▶ A bit of a mystery; see <https://delphinqa.ling.washington.edu/t/why-would-an-explicit-link-from-subj-to-slash-be-necessary/> 522
- ▶ Lots of small changes due to new lexical types, e.g. in Lexicon, Case
 - ▶ Will systematize while merging into trunk

Matrix
DELPH-IN 2020

New types and customization

Types: Head-adjunct phrase

<i>Subtype of head-adj-int-phrase</i>		
HEAD-DTR SYNSEM	LOCAL CAT	$\left[\begin{array}{ll} \text{HEAD} & +nvr \\ \text{VAL SUBJ} & clist \end{array} \right]$
	L-QUE	<i>bool</i>
NON-HEAD-DTR SYNSEM	LOCAL CAT	$\left[\begin{array}{ll} \text{HEAD} & +jrp \\ \text{VAL COMPS} & \langle \rangle \end{array} \right]$
	L-QUE	<i>bool</i>

Matrix verbs used to be spuriously constrained to be SPR-empty; adding head-adjunct rule exposed that (adpositions need to modify SPR *cons* nouns, but also verbs!). A lot of SPECs had to be added...

Language	Family	Gram./ungram.	cov%	overgen%	avg. ambig	Phenomena
Russian	IE	207/87	67.6	5.7	1.77	Optional multiple fronting, second position particles, case, free word order, coordination embedded clauses
English	IE	27/23	100	17.4	1.11	Single obligatory fronting, subject-auxiliary inversion embedded clauses
Yukaghir	Yukaghiric	10/14	100	7.1	1.1	Morphological marking, focus case
Japanese	Japonic	7/3	100	0	1.14	<i>In situ</i> , optional particles embedded clauses
Chukchi	Chuk-Kam	6/0	100	n/a	1.33	Interrogative verbs

Evaluation to be done in the next few weeks.

- ▶ Several constituent question strategies now covered in the Matrix
- ▶ Support for adverbs, adpositions
- ▶ Changes in the core mostly in relaxing QUE/SLASH constraints
- ▶ New types and features: L-QUE, WH
 - ▶ WH actually useful for more than one thing (particles and embedded questions)
- ▶ Append-lists work well overall, pending a few investigations
- ▶ Wh-filler-gap rule
 - ▶ Needs to be better integrated with InfoStr rules
- ▶ Unary rules for *in situ* and 2nd position clitic questions
 - ▶ Mostly unproblematic unless include optional fronting
